## PITIABLE IMPROVIDENCE.

### **The Way Money Is Wasted Through Ignorance of Food Values.**

Examples of glaring ignorance of food values may well be culled from the notes of those experts who have visited the poor of the different cities. In the slums of Chicago it was found that a woman whose husband was out of work and whose family was living on a few cents a day bought lettuce, a food so innutritious that, at least when out of season and high in price, it is a luxury even for the rich. This woman sacrificed the inexpensive but nutritious classes of foods for leaves containing over 80 per cent of water and 5 per cent of refuse. It has been truthfully said that a man would starve to death on a diet of lettuce alone.

Pitiable improvidence was found in the New York slums. A watchman was feeding his family at the rate of 4 cents per person a day—all that he could afford—yet his wife bought expensive cuts of beef instead of the equally nutritious cuts of lower price; also large quantities of butter whose value might have been invested in dried beans and more bread. She also wasted money on soda crackers and bumbles costing two or three times as much as bread and containing no more nutrition. It was estimated that his wife might have obtained about eight times as much nutrition for her money had she substituted dried peas for green peas. Another large saving would have been the substitution of fresh for condensed milk. John E. Watkins in Reader Magazine.

## THEY WERE GLUTTONS.

## The Gormands of the Eighteenth Century in England.

Plenty was the watchword of the eighteenth century gormand in England. His tables groaned under an array of food warranted to take away the appetite of all save the Gargantuanas of the day. One blessing was derived from the old sops and the later asques and ollios soup, which now as ever the prelude to the dinner. It was removed for meat or fish—a chine of mutton and three ducks in the case of Squire Hill at Teddington, who, for entrées to support them, offered pâtés with eggs, fillet of beef, and scollops, turkey en daube, stewed carp, veal à la royale, fricassee chicken, with ham and pigeons for center dish. This was but the first course or relay. Next came the roasts—two pheasants and four partridges and six teal, and so, for side dishes, sweetbreads and marrow, four woodcock and ten snipe, salmon and smelts, marrow pudding, a quarter of lamb and oyster loaves, for center dish, mince pies. And men ate and survived, and still had heart within them to wait the removal of the cloth, and, greeting the dessert, sat over the mahogany until indeed they fell beneath it. After all, gormand is not the name for such as these. They were gluttons.

Stevenson's Love Test, a beautiful testimony to one's

A beautiful testimony to one's services was paid by Robert Louis Stevenson at a thanksgiving dinner in San Francisco.

"There, on my right," said Steven-  
on, replying to an unexpected propos-  
of "The Host," "sits she who has  
left lately from our own loved native  
land come back to me—she whom,  
with no lessening of affection to those  
others to whom I cling, I love better  
than all the world besides—my mother.  
From the opposite end of the table,  
my wife, who has been all in all to me,  
when the days were very dark, looks  
right into my eyes—while we have  
both grown a bit older—with undimin-  
ished and undiminishable affection."

#### **Which Won the Prize?**

Three students of the Ecole des Beaux Arts, Marseilles, were talking in a cafe. "My dear fellow," said one, "I planted the other day a little piece of wood in imitation of marble so perfectly that it sank to the bottom of the water."

"Pooh," said another. "Yesterday I suspended my thermometer on the seal that holds my 'View of the Polar Regions.' It fell at once to 20 below

"That's nothing," said the last. "My  
part of the message is as follows:

**now Flies Walk on Window Panes.** The microscope reveals the neat contrivance which enables a fly to walk up window pane or defy the laws of gravity by gliding along, back downward, on the ceiling. The magnifier shows the foot to be made up of two pads covered with fine, short hair, each pad having a hook above it. Behind each pad is a bag filled with a sticky fluid which oozes out whenever the fly puts his foot down. The amount which is pressed out of each foot is very small indeed, but, taken all together, it is ample sufficient to hold the insect in any position he chooses.

Should any persons who have paid 1904 taxes, find any items of their property on which they have paid taxes advertised in the foregoing list, if they will send me the number and date of their receipt, I will investigate and if taxes have been paid on same, I will immediately have such item struck from the list at my expense. We have been as careful as possible in preparing this list, but as it is a difficult undertaking, occurring a period of more than six months.
